ALLERGY, PHADIATOP, ADULT @ (ImmunoCAP, FEIA)	0.17	KUA/L	<0.35

Interpretation

REFERENCE RANGE IN KUA/L	REMARKS
<0.35	Negative - Indicates that symptoms are not caused by common environmental allergens. May require further testing.
>=0.35	Positive - Indicates that patient is atopic. Higher values indicate higher degree of sensitization to common inhalant allergens.

Comments

This test differentiates between atopic & non-atopic diseases and comprises a balanced mixture of relevant allergens that react with specific IgE antibodies in the patient serum.

Atopy is a personal and / or familial tendency usually in childhood or adolescence to become sensitized and produce IgE antibodies in response to ordinary exposure to allergens. As a consequence these individuals can develop typical symptoms of Asthma, Rhinoconjunctivitis or Eczema.
